SUMMARY

Computer engineer and software developer specializing in embedded systems and robotics (C/C++, STM32, Arduino, Raspberry Pi, ROS/OpenCV), with a parallel track record of shipping consumer software end-to-end — two self-published Unity mobile games live on the App Store and Google Play, plus Python and artificial intelligence (LLM)-based automation tools. AUVSI SUAS 2025 mission judge (RoboNation) and founder of two award-winning university UAV teams. Currently a freelance consultant supporting embedded hardware, POS systems, and web infrastructure for small businesses, and building a physical AI assistant (Raspberry Pi 5 + STM32 + sensor array).

SELECTED PROJECTS

LUMEN — *Survivor-style space game · Unity, C# · 2026*

- Independently designed, developed, and published a survivor-action game to the App Store and Google Play.
- Built the full monetization and release pipeline: AdMob mediation, in-app purchases, Google Play Games Services, and a custom App Store Connect screenshot/asset pipeline (Python/Pillow).

Color Sort — *Ball-sort puzzle game · Unity, C# · live on Google Play · iOS in App Store review*

- Self-published puzzle game with 100+ procedurally generated levels and full Turkish/English localization (130+ keys).
- Implemented AdMob mediation (banner/interstitial/rewarded) and diagnosed a low ad fill-rate issue to improve revenue.
- Resolved an App Store guideline rejection with a detailed technical differentiation submission; iOS release is currently in App Store review.

AI Trading Assistant — *Python, FastAPI, Claude LLM · private repository*

- Built an autonomous trading system combining technical/fundamental market analysis with LLM-based news sentiment analysis (Anthropic Claude).
- Integrated the Alpaca brokerage API for automated order execution, a React dashboard, and a Telegram bot for live alerts and remote control. Stack: Python, FastAPI, PostgreSQL, scikit-learn, Anthropic API, React.

Jarvis — *Physical AI assistant · in development, 2026–present*

- Designing a desktop-companion AI assistant built on a Raspberry Pi 5 and STM32 microcontroller with a custom sensor array; currently in the base hardware/architecture phase.

PROFESSIONAL EXPERIENCE

Independent Consultant — POS Systems, Embedded Hardware & Web Infrastructure *Jan 2023 – Present*
Freelance / Self-Employed *Massachusetts, US*

- Provide ongoing technical support to two active restaurant clients: POS hardware installation, configuration, and maintenance across multiple vendor systems.
- Maintain and troubleshoot client websites and backend/data infrastructure.

Private Instructor — Embedded Systems *2023 – Present*
Freelance / Self-Employed *Massachusetts, US*

- Design and deliver a self-built Raspberry Pi and Arduino curriculum to two high-school students, 2 hours/week each, on an ongoing weekend schedule.

Co-Founder *Mar 2026 – Jun 2026*
Multi-Tenant SaaS POS & Ordering Platform (Full-Stack) *Remote, US*

- Co-founded a multi-tenant restaurant ordering & POS SaaS platform (React/Vite, Express/TypeScript, PostgreSQL, Stripe Connect); contributed to platform architecture during a 3-month tenure before departing the partnership.

Contract Interpreter (Turkish/Kurdish – English) *Feb 2026 – Present*
Baystate Interpreters, Inc. *Massachusetts, US*

- Provide on-demand interpretation services at the RMV and area hospitals, supporting patients and clients in medical and administrative settings.

Embedded Systems Intern *Aug 2021 – Sep 2021*
TÜBİTAK UME (National Metrology Institute) *Kocaeli, Turkey*

- Programmed an ARM-based STM32 microcontroller for sensor-based temperature measurement, a Nextion LCD interface, and a C#/Visual Studio ground station application.

Mid-Level Software Developer *Oct 2020 – May 2022*
Atatürk University Distance Education Application & Research Center (ATAUZEM) *Erzurum, Turkey*

- Integrated and maintained the Moodle e-learning platform across all university faculties during the COVID-19 transition to remote learning.

Computer Systems Analyst *Feb 2021 – Mar 2021*
Atatürk University, Office of International Affairs *Erzurum, Turkey*

- Managed IT infrastructure, hardware/software troubleshooting, and systems optimization; temporarily supported the Office of International Affairs as an emergency IT worker.

Software Trainer *May 2021 – Aug 2021*
TÜBİTAK DENEYAP (T3 Foundation) *Erzurum, Turkey*

- Taught software and algorithmic fundamentals to middle-school students in a national TÜBİTAK/T3 Foundation technology workshop program.

LEADERSHIP, COMPETITIONS & RECOGNITION

Mission Judge — AUVSI SUAS 2025 *Jun 23 – 30, 2025*
RoboNation *Maryland, US*

- Evaluated competing university teams' autonomous UAV mission performance at one of the premier collegiate unmanned-systems competitions.

Founder & Team Captain — ATA UAV Team *Sep 2021 – Jul 2022*
Atatürk University *Erzurum, Turkey / Maryland, US*

- Founded and led a UAV team through AUVSI SUAS competition qualification and participation in Maryland.
- Secured ~$50,000 in research funding; received Atatürk University Teknokent and Rectorate recognition awards; team was featured in Turkish national media.

Founder & Team Captain — ATATEB UAV Team *Oct 2020 – Oct 2021*
Atatürk University *Bursa, Turkey*

- Led the team's preparation and participation in the TÜBİTAK Teknofest UAV competition (Free Duty category); secured ~$20,000 in research funding.

Founder & President — Technology and Computer Club (ATATEB) *Jan 2019 – Jun 2022*
Atatürk University *Erzurum, Turkey*

- Founded and led a student technology club encompassing 5 competition teams; secured $100,000+ in combined research and thesis project funding.
- Received an outstanding achievement award from Atatürk University and Technocity.

TECHNICAL SKILLS

Embedded & Robotics: C, C++, STM32 (UART, SPI, I2C), Arduino, Raspberry Pi (3/4/5), Jetson Nano, ROS, Gazebo, OpenCV, Sensor Integration, Firmware Development

Game & App Development: Unity, C#, VB.NET, HTML/CSS

AI & Automation: Python, Machine Learning (scikit-learn), Large Language Models / LLM Integration (Anthropic Claude API), FastAPI, REST APIs, Pandas/NumPy

Web & Data: React, PostgreSQL, SQL Server, Node.js/Express (working knowledge)

Tools & Platforms: Git, Linux, Visual Studio/VS Code, Android Studio, Atollic True Studio, Nextion Editor, Mission Planner, App Store Connect, Google Play Console, AdMob

Languages: Turkish (native), Kurdish (native), English (fluent) — contract interpreter (Baystate Interpreters, Inc.)

CERTIFICATIONS

Embedded Hardware and Operating Systems (28DIGITAL, 2024) · Introduction to the Internet of Things and Embedded Systems (Coursera / UC, 2024) · Introduction to Software Engineering (IBM, 2024) · Software Engineering Essentials (Coursera, 2024) · Foundations of Project Management (Google, 2024)

EDUCATION

Bachelor of Science, Computer Engineering — Atatürk University, GPA 3.20 *Jun 2022*

Business Administration and Management — Computer Systems Institute, GPA 4.0 *Jan 2024 – Dec 2025*

Intensive English Program (ESL) — IVY Christian College *Oct 2023*
